## **Brilliance**

**Mikael Eriksson**

*MAXlab, Lund University, Ole Romers V. 1Box 118, S-221 00 Lund, Sweden*

One of the most important figures of merit for third-generation sources is the brilliance. A rather intuitive physical picture of the diffraction properties of synchrotron radiation will be presented in this talk. The consequences of these diffraction properties on the design of third-generation light sources will also be discussed.
