

PETER INGRAM is a Physicist at Duke University, as well as holding an adjunct appointment in the **Department of Pathology** at Duke University Medical Center, in Durham NC where he teaches courses and conducts research in analytical microscopy and imaging. He is a graduate of the University of Southampton (U.K.) where he received his Ph.D. degree in Physics in 1963. His active scientific interests include optical and electron microscopy, x-ray and electron diffraction, and microprobe analysis. Current areas of research include multispectral microscopy as applied to pathology and physiology, especially the analysis of micron and submicron cellular inclusions, intracellular elemental distributions, and analytical and imaging techniques in electron, photon and ion microscopies. He is co-editor (with John Shelburne and Victor Roggli) of a book entitled **Microprobe Analysis in Medicine** published by Hemisphere in 1989, and also of **Biomedical Applications of Microprobe Analysis** published by Academic Press in 1999. He currently serves as a member of the Scientific Advisory Committee at APS.
