B&W INabler

Revision 1.0

Preface

Thank you for choosing the Miglia B&W INabler. This device allows to capture black&white footage with A/D converters that require a colour sub-carrier signal.

System Requirements:

- PowerR D-10, Director's Cut, Director's Cut 'Take 2'.

Warranty Information:

The B&W INabler is warranted against defects in materials and workmanship for a period of two (2) years from the date of original purchase.

If you discover a defect, Miglia technology Ltd will, at its sole option, repair or exchange the product at no charge to you, provided you contact Miglia Technology Ltd Technical support to obtain a Return Authorisation Number (RMA) and instructions on where and how to obtain repair.

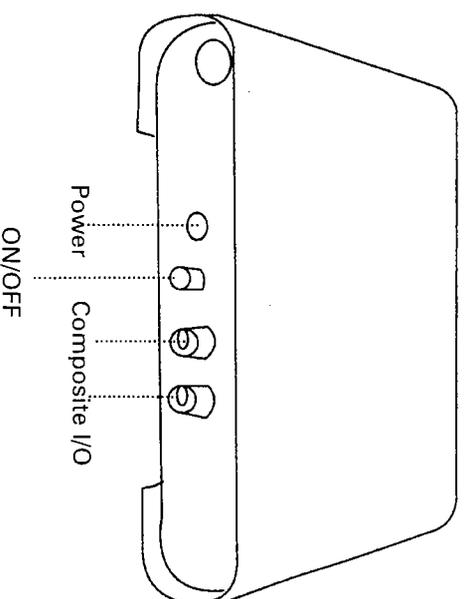

This warranty does not apply if the product has been damaged by accident, abused, misused; failure to follow supplied instructions; has been modified, repaired or undergone attempted repair by unauthorised personnel; has a serial number that been removed, modified or defaced.

The manufacturer of the product does not warrant or represent that all software or hardware will function error-free when used in conjunction with this product.

Using B&W INabler

In order to allow black&white capture, B&W INabler needs to be connected between your Director's Cut and your monochrome analogue video equipment.

1. Connect the power supply to the power socket and press the ON button to power up the B&W INabler.
2. Connect a composite cable from one of the two 'Video' connectors to the input of your Director's Cut. Then connect another cable from B&W INabler's remaining 'Video' port to your analogue video source.

You can now import black&white footage via your Director's Cut - there are no special settings to adjust on your converter when changing from a colour to black&white analogue source.
