

# S7 operation update

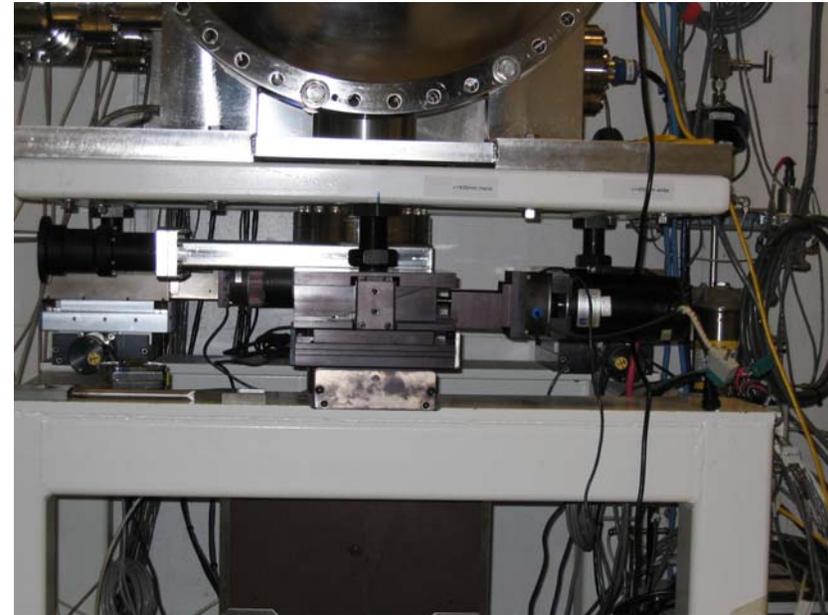

Eric Dufresne, TRR group meeting, Feb. 15, 2005

- Following the design of a new mask for our P4, Mark Erdmann has updated our beamline drawings and ray traces. The design of the new mask is under review now.
- ED was foolish enough to replace the broken jack Y2 on our monochromator during the last shutdown. Mark Erdmann and Danny Nocher replaced the jack with a spare jack borrowed from 7BM. The replacement was made difficult by the last minute **Electrical work stand down** (see next page).
- Dohn Arms upgraded one of our Sun Ultra 10 workstation to Salaris 9. The upgrade went well. He plans to upgrade our main server later on this year.
- The 7ID-D Huber needs significant repair. We were fortunate enough to have Mr Huber Jr to visit with his main technician. He was able to lubricate the Chi circle enough for use this run (this circle would not go 360 deg.). They will come in the next shutdown at UNI-CAT so it is possible to arrange service requests.
- Don Walko figured out the logic for automatic X-ray shutter control on 7ID. No more green sheets...
- We have a new resident user, SooHeyong Lee, PhD student of David Reis. He will be at ANL for one year.
