

Comparisons among various EPICS implementations: - SLS, Bessy-II, KEKB (and JKJ) -

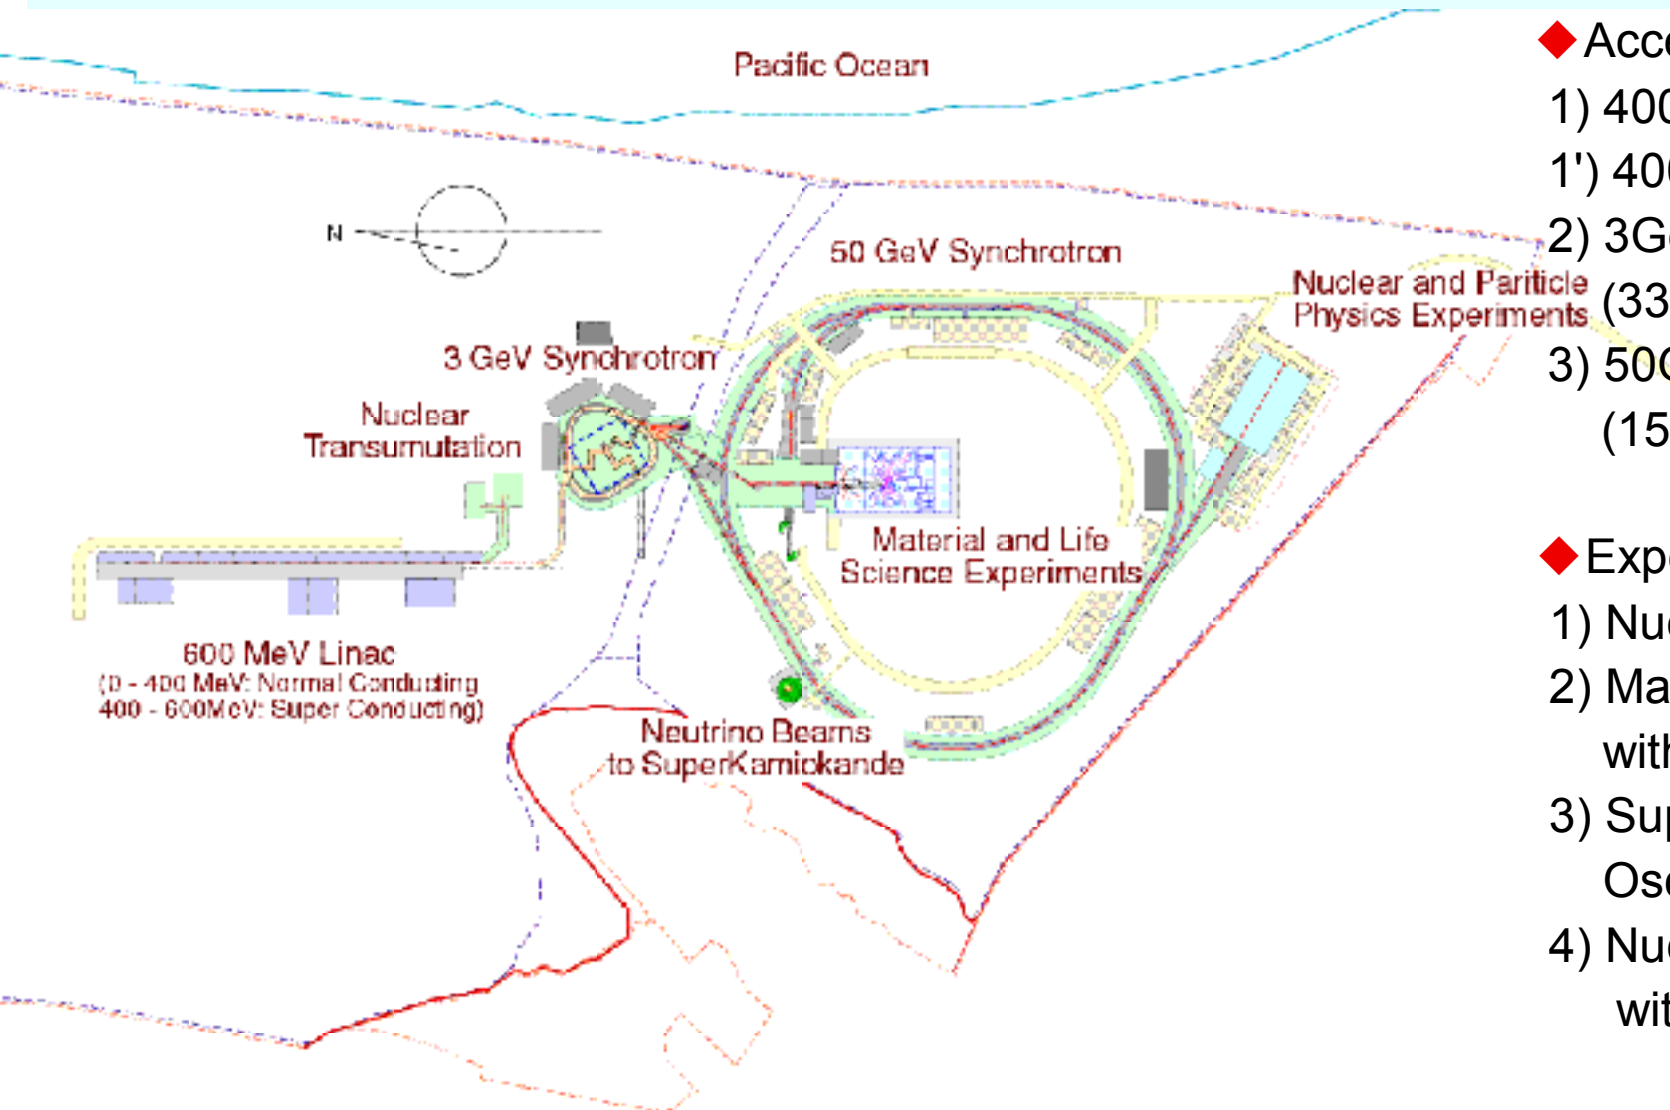

Norihiko Kamikubota, KEK
<norihiko.kamikubota@kek.jp>

for

Joint Hadron Project Controls Group
EPICS Traversal Group at KEK

- ❖ **JKJ: Joint Hadron Project - status**
- ❖ **Comparison of Epics implementations**
- ❖ **Plan - Implementations for JKJ**

JKJ - JAERI / KEK Joint Hadron Project

◆ Accelerators

- 1) 400MeV Proton Linac
- 1') 400->600MeV S.C.Linac
- 2) 3GeV Rapid-Cycle Sync. (333microA, 1MW)
- 3) 50GeV Synchrotron (15microA,0.75MW)

◆ Experiments

- 1) Nuclear Transmutation
- 2) Material and Life Science with neutrons/muons
- 3) Super Kamioka Neutrino Osc. with neutrino beams
- 4) Nuclear and Particle Phys. with exotic particles

- ◆ High-power Proton-accelerator Complex
- ◆ Under Construction at JAERI-Tokai Site

JAERI-Tokai

◆ Japan Atomic Energy Research Institute National Research Institute for Nuclear Reactors

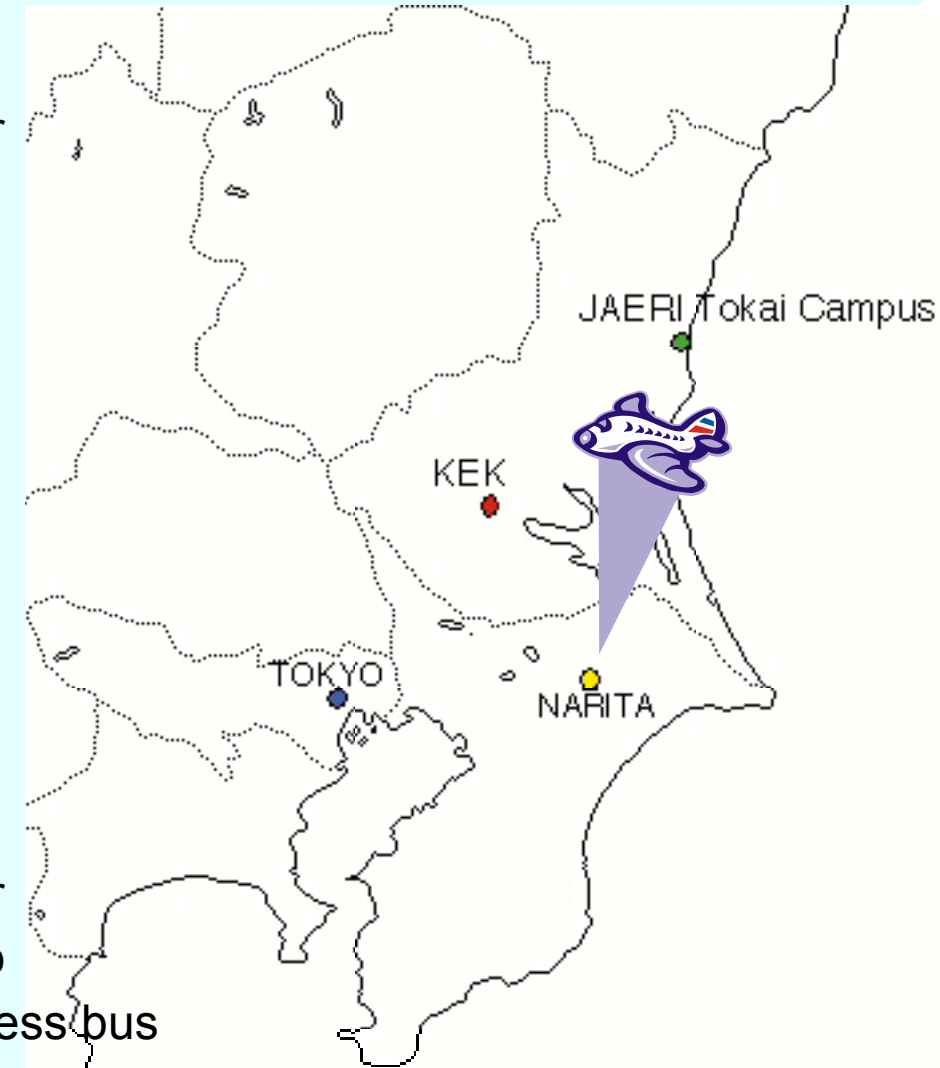

- ◆ JRR-1
The first nuclear reactor
in Japan
(1957-1969)

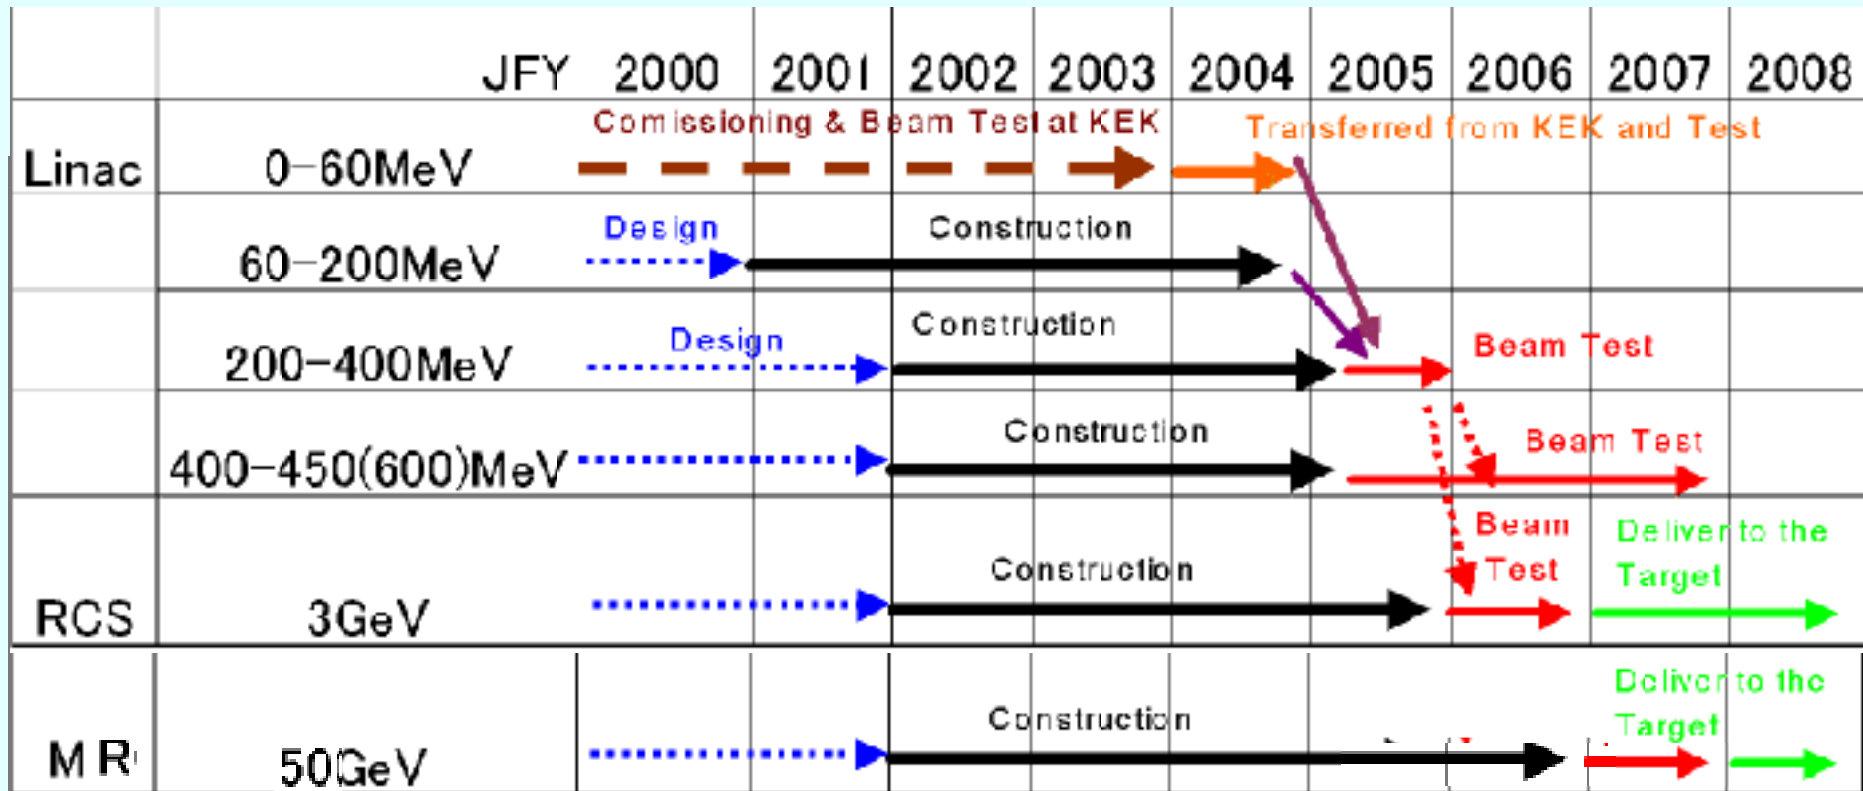

photo from JAERI homepage

- ◆ Location
60km from KEK
60-80min by car
130km from Tokyo
2-3 hr.s by express bus

JKJ - Schedule

- ◆ “60MeV” Proton Linac at KEK
 construction at KEK (Tsukuba site), will be moved to Tokai in 2004
 beam study of Ion Source->RFQ (up to 3 MeV) in June-July of 2002
 prototype control system by EPICS toolkit has been developed

JKJ - Accelerator Status of Aug.2002

- ◆ Linac at KEK-Tsukuba (up to 3MeV)
(RFQ and part of the IonSource)

photo by y.kondo

- ◆ Linac at JAERI-Tokai

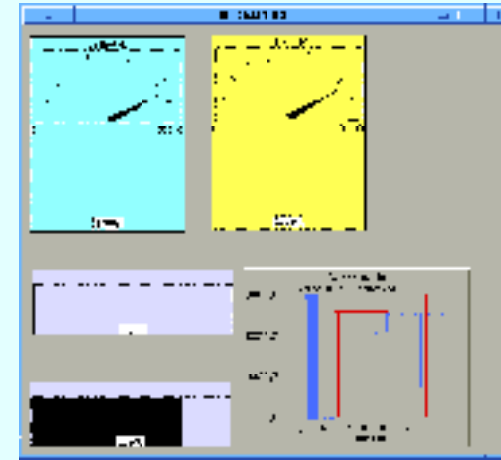

- ◆ 3GeV Ring at JAERI-Tokai

JKJ Control System - Status

◆ at KEK-Tsukuba

- o small EPICS-based prototype (1 HP + 6 VMEs)
monitoring part of the 60MeV Linac since Nov.01
test - channel archiver with ~10 records
- o EPICS device support for network devices - OK 
- # use Ethernet as a field-bus
 - a) PLC (Yokogawa FA-M3)
 - b) Measurement Station (Yokogawa WE7000)
 - c) DTL-Q Power-supply (dedicated Ethernet Controller)

ion-source monitor
(Yokogawa PLC)

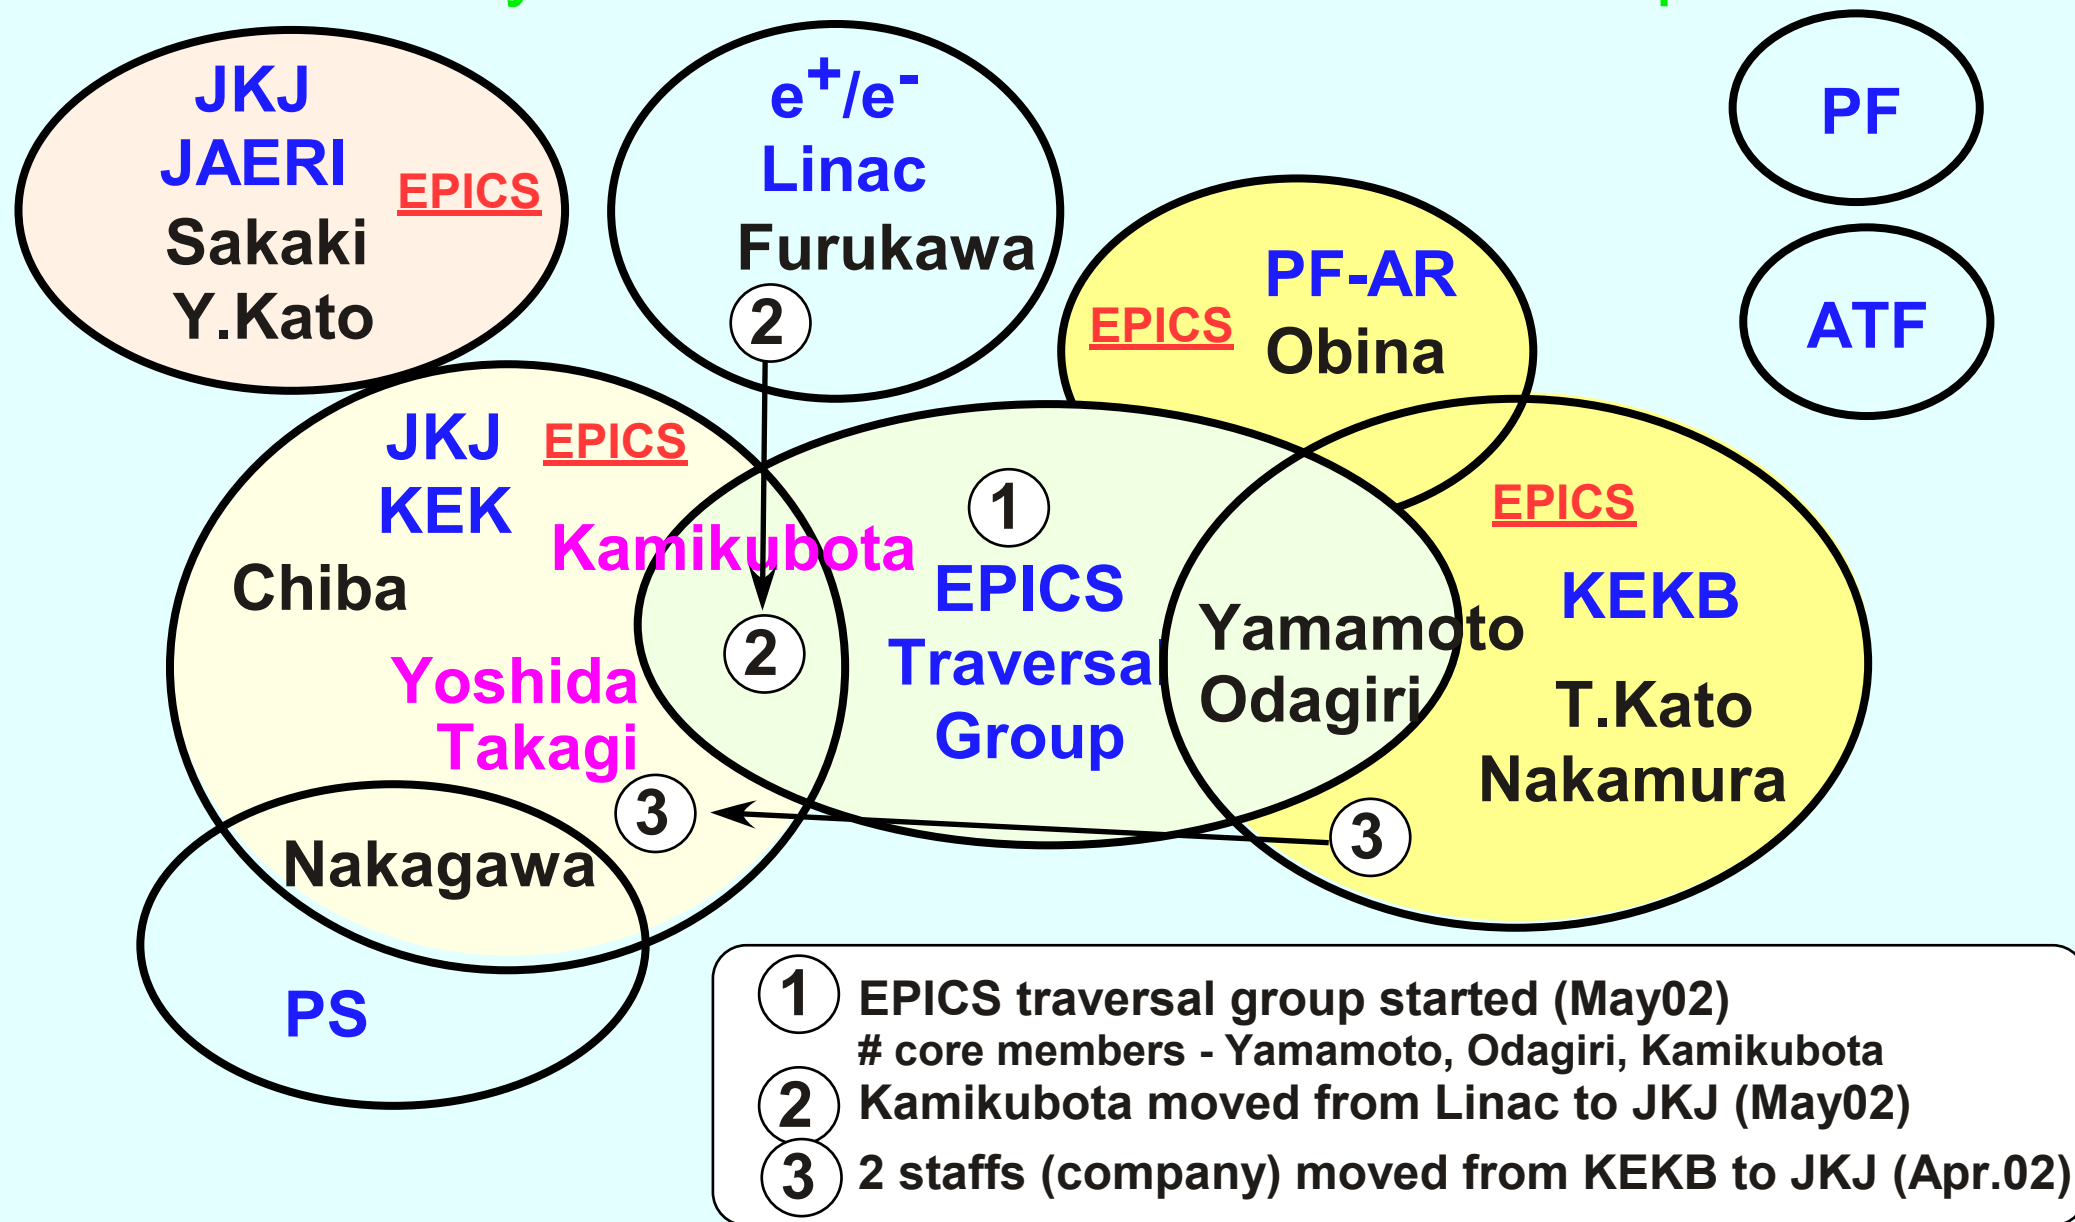

◆ at JAERI-Tokai

- o another small EPICS-based prototype (1 HP + a few VMEs)
- o EPICS device support for made-in-Japan VME modules - OK 
- o Advanet standard io-modules (ai,ao,di,do,step-moter)
- o test - Java GUI with JCA (Java channel access)

◆ Now we are ready to :

- o merge two EPICS prototype systems
- o develop a new EPICS system for the real JKJ accelerators

JKJ Control System - Control Staff Relationship

Comparison of EPICS Implementations - motivation

- ◆ N.Kamikubota and J.Chiba visited **SLS (Swiss)** and **Bessy-II (Berlin)** in July 2002
hint to choose 'standard EPICS tools/environment' for new JKJ Control System
- ◆ KEKB : B-factory rings (8GeV e- and 3.5GeV e+) since **1998**
good reference
- ◆ SLS / Bessy-II : Sync. Radiation Facilities
EPICS-based systems **after KEKB**

experiences

recent trends

- ◆ JKJ : subjects what we have to discuss soon

Main machine

OPI

Database

[Timing]

Network

IOC

(EPICS db)

[Naming

**Directory structure
and Environment**

**Database
(general)**

Convention]

**[Education
and Training]**

and more ...

Comparison of EPICS Implementations - Main machine

◆ SLS

Console - Linux
Main - (Sun?)
Servers - Linux
Personal - Linux

◆ Bessy-II

Console - HP 11
Main - HP 10.20
Servers - HP
Personal - Linux

◆ KEKB

Console - Macintosh
Main - HP10.20 & 11
Servers - HP, Compaq and Linux
Personal - Macintosh

◆ Linux has become **the most common platform** for software development

◆ SLS uses Linux intensively for various purposes

OPI consoles are PCs with 2/4 displays

Linux File servers (at least 6 Rack-mount PCs [DELL Power Edge])

Oracle Database server on Linux (DELL PowerEdge)

IOC boot servers (each for 12 sectors, keep copies of the main IOC server)

gcc to compile EPICS ioc-core (note: VxWorks license problem is unclear)

Comparison of EPICS Implementations - Network

- | | | |
|-----------------------|-----------------------|----------------------------------|
| ◆ SLS | ◆ Bessy-II | ◆ KEKB |
| 100BaseTX switches | 100Mbps switch | 100Mbps FDDI and 10Mbps switches |
| Nortel 350-24T | 10Mbps optic switches | DEChub |
| (14x100Mbps, 1x1Gbps) | Cisco product | ring topology |
| star topology | star topology | |

- ◆ <I think> Differences come from when the network system was introduced
- ◆ Recent trend - use **100BaseTX switches** with star-topology links
if possible - use **GbE** at the center, use optic-fiber cables

Comparison of EPICS Implementations - OPI

◆ SLS

Console -

Linux with 2/4displays

Matrox video card

MEDM@Linux

Launcher - Tcl/Tk

◆ Bessy-II

Console - HP 11

DM2K@HPUX

Launcher - Tcl/Tk

◆ KEKB

Console -

Macintosh with multi-displays

+ X-server software

MEDM and Python

Launcher - SAD script

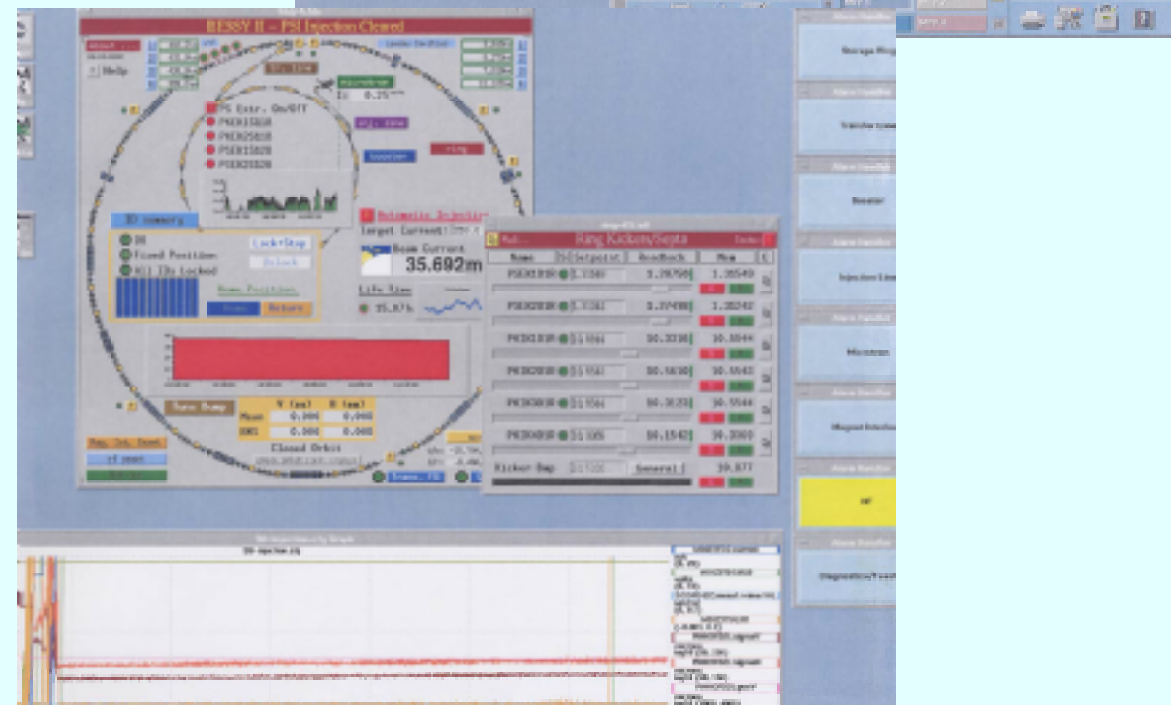

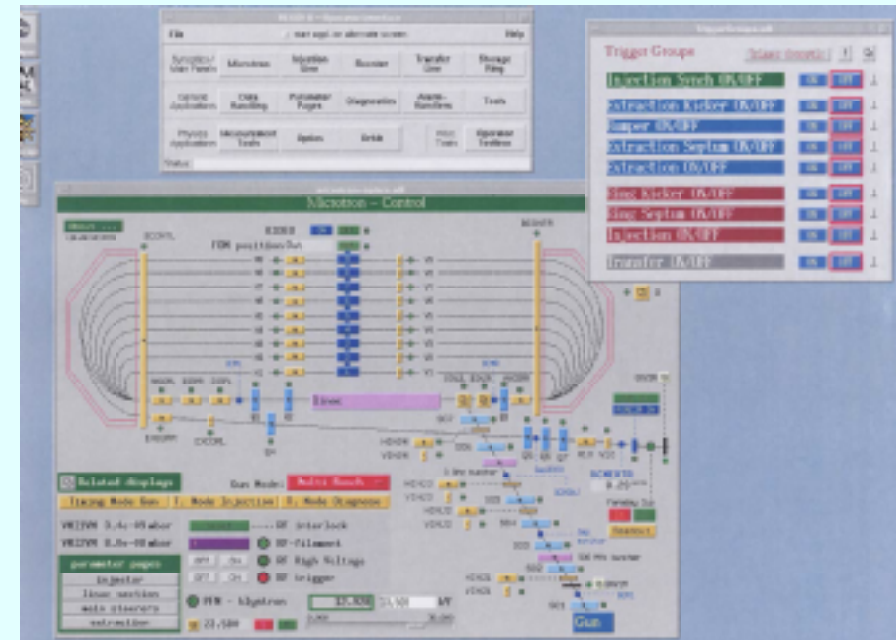

◆ Is **EDM** a future promising Display Manager ?
for me it is not clear ..

◆ **Linux with multiple displays** seems good for consoles

◆ SLS console displays

◆ Bessy-II screenshot

Comparison of EPICS Implementations - IOC

◆ SLS

VME64X and Hytec standard modules

noise tolerance, hot-swap, backplane cabling

PowerPC CPU (Motorola2306)

Policy - all the signals should come to VME

◆ KEKB

CAMAC modules

ARCnet/VME for power-supplies

PowerPC CPU (Force6750)

◆ Bessy-II

use CAN - a CAN line has 25-50 CAN adapters: 40m - 1Mbps (typical case)

MC68K CPU (Motorola162)

Policy - all the signals should come to CAN adapter

◆ simple policy is preferable - it makes everything simple & maintenance easy

◆ CPU - PowerPC is popular

◆ Both SLS/Bessy have remote reset lines of CPUs by CAN-bus

- ◆ SLS - typical VME crate for vacuum (analog IO modules)

Rack systems for control

VME64X -
backplane cabling

◆ Unique and Excellent ! at SLS

Self-study system of EPICS
with basic VME modules
(di, do, ai, ao, step-moter)

People from companies
can study with this system

Text is here -

<http://www.sls.psi.ch/controls/help/tutorials/epics/index.html>

◆ Bessy-II - typical VME crate

Remote reset lines
by CANbus

CAN-bus chains
for small power-supplies

CAN control cards

◆ Unique and Excellent ! at BESSY-II

Aftrenoon tea party
everyday !

Comparison of EPICS Implementations - Directory structure and Environment

- ◆ Directory structure - no mention in the EPICS toolkit, but typically ...

- 1) EPICS source (base, extensions) and HOSTARCH binaries
- 2) Operation (sources for applications/configurations)
- 3) Development (test versions of applications/configurations)

CVS controlled

- ◆ Implementations

	SLS	Bessy-II	KEKB	JKJ@KEK	JKJ@JAERI
EPICS source	/prod /dev - test with different EPICS versions	/opt/epics	/cont/epics	/jhf/epics	/control/epics
Operation	/prod	/opt/OPI /opt/IOC	# not simple		
Development	/work	/home ?	# not simple		

- ↓
- ◆ Standardization of Dir./Env. is in progress for JKJ
 - # based on KEKB experiences
 - # by EPICS traversal group

◆ Proposed “Standard” Directory Structure

```

/$(JKROOT)/epics +-          # EPICS source
  +- R3.13.4 +- base/, extensions/,
  |       +- bin/<ARCH>, lib/<ARCH> etc.
  +- R3.13.6
  +- R3.14.1

/$(JKROOT)/opr ---+         # Operation - CVS controlled area
  +- config/ --- ar/, restart/, etc/ etc.
  +- device_app/           # IOC-level applications
  +- operation_app/        # Applications for operation

/$(JKROOT)/dev              # Development - CVS controlled area
                          # same directories as “opr”

/$(JKROOT)/local +-        # free software
  +- lib/, bin/            # link to $(JKMISC)
  +- share/
  +- src --- GNU/, SAD/, Python/, PostgreSQL/, etc.

/opt -----+              # commercial software
  +- CapFAST/, Tornado/, Oracle/, etc.

/$(JKMISC) -----+        # platform dependent binaries
  +- <ARCH> +-            # hp700 | Linux | ...
                          +- bin/, lib/, etc.

/$(JKLOG) -----+-        # various operation log
  +- bootlog/, ioclog/, orbit/, Archiver/, restart/, etc.

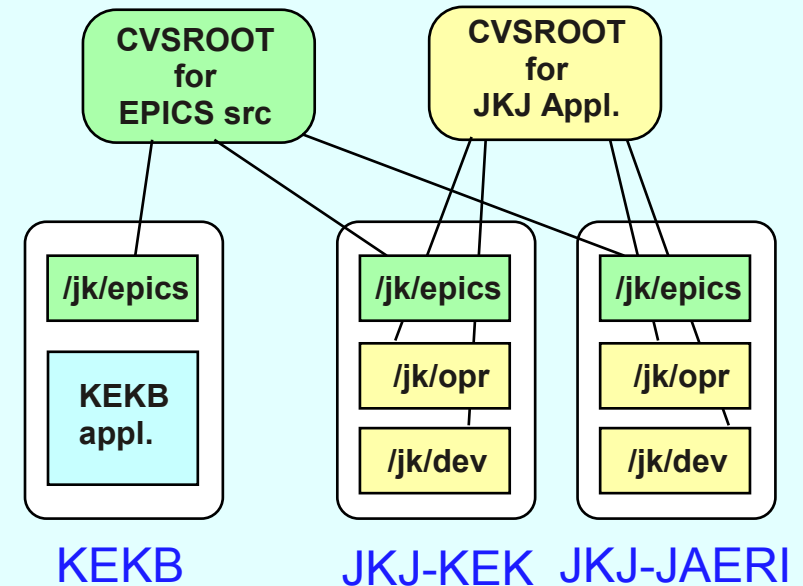

/scratch                    # work area for large files

```

◆ for JKJ

JKROOT = jk, JKMISC = jkmisc, JKLOG = jklog

EPICS source also controlled by CVS

◆ for JKJ

EPICS traversal group is now trying to complete “standardization”

◆ Environment - other ideas

- o **Control network is isolated** from the laboratory network [SLS, BESSY-II]
no router, but **share file servers**
effective to avoid unnecessary broadcast, virus, attacks from outside, ...
=> ideal for management, but sometimes inconvenient
- o Use resources of **Computer Center** [SLS]
control network is **operated/maintained** by Computer Center
=> experts are often inevitable for management of recent network systems
linux support (kick-start floppy for installation, etc.)
"/home" served by Main FileServer of Computer Center
=> user can use his/her **"/home"** at any PC (both Linux and Windows)
- o **Study and Simulation** [KEKB]
SAD is widely used and very successful at KEKB - and free ..
Matlab / Mathematica - commercial tools

Comparison of EPICS Implementations - Database (EPICS db)

◆ SLS

VisualDCT -

Java 1.2 based

editor was used before

◆ Bessy-II

CapFast to make templates
editor to modify templates

◆ KEKB

CapFast to make templates
editor to modify templates

◆ VisualDCT

developed by IJS/Slovenia (cosylab)

executable files are downloadable from SLS - free !

available at any platform where Java1.2 (or later) works

◆ VisualDCT looks promising for EPICS db management

Evaluation study started by JKJ staffs

VDCT(executable) is here -

http://www.sls.psi.ch/controls/software/VisualDCT/visual_dct_demo.html

◆ VDCT runs at a Windows PC (sample db file of the KEK 60MeV proton Linac)

The screenshot shows a Windows XP desktop environment. The Visual DCT application is running, displaying a console window with the following output:

```

o) Checking consistency with DDB file ...
Warning: Device 'sViewPk' is not defined
Warning: Device 'sViewPk' is not defined
Warning: Device 'sViewPk' is not defined
Warning: Device 'sViewPk' is not defined
Warning: Device 'sViewPk' is not defined
Warning: Device 'sViewPk' is not defined

```

The main application window displays four data panels, each representing a different component of the linac:

- IS DC Arc:** Lists parameters for DC arcs, including fields like `ISDC01`, `ISDC02`, `ISDC03`, `ISDC04`, `ISDC05`, `ISDC06`, `ISDC07`, `ISDC08`, `ISDC09`, `ISDC10`, `ISDC11`, `ISDC12`, `ISDC13`, `ISDC14`, `ISDC15`, `ISDC16`, `ISDC17`, `ISDC18`, `ISDC19`, `ISDC20`, `ISDC21`, `ISDC22`, `ISDC23`, `ISDC24`, `ISDC25`, `ISDC26`, `ISDC27`, `ISDC28`, `ISDC29`, `ISDC30`, `ISDC31`, `ISDC32`, `ISDC33`, `ISDC34`, `ISDC35`, `ISDC36`, `ISDC37`, `ISDC38`, `ISDC39`, `ISDC40`, `ISDC41`, `ISDC42`, `ISDC43`, `ISDC44`, `ISDC45`, `ISDC46`, `ISDC47`, `ISDC48`, `ISDC49`, `ISDC50`, `ISDC51`, `ISDC52`, `ISDC53`, `ISDC54`, `ISDC55`, `ISDC56`, `ISDC57`, `ISDC58`, `ISDC59`, `ISDC60`.
- IS RF Arc:** Lists parameters for RF arcs, including fields like `ISRF01`, `ISRF02`, `ISRF03`, `ISRF04`, `ISRF05`, `ISRF06`, `ISRF07`, `ISRF08`, `ISRF09`, `ISRF10`, `ISRF11`, `ISRF12`, `ISRF13`, `ISRF14`, `ISRF15`, `ISRF16`, `ISRF17`, `ISRF18`, `ISRF19`, `ISRF20`, `ISRF21`, `ISRF22`, `ISRF23`, `ISRF24`, `ISRF25`, `ISRF26`, `ISRF27`, `ISRF28`, `ISRF29`, `ISRF30`.
- IS End HV:** Lists parameters for end high voltage, including fields like `ISEHV01`, `ISEHV02`, `ISEHV03`, `ISEHV04`, `ISEHV05`, `ISEHV06`, `ISEHV07`, `ISEHV08`, `ISEHV09`, `ISEHV10`, `ISEHV11`, `ISEHV12`, `ISEHV13`, `ISEHV14`, `ISEHV15`, `ISEHV16`, `ISEHV17`, `ISEHV18`, `ISEHV19`, `ISEHV20`, `ISEHV21`, `ISEHV22`, `ISEHV23`, `ISEHV24`, `ISEHV25`, `ISEHV26`, `ISEHV27`, `ISEHV28`, `ISEHV29`, `ISEHV30`.
- IS Acc HV:** Lists parameters for acceleration high voltage, including fields like `ISACHV01`, `ISACHV02`, `ISACHV03`, `ISACHV04`, `ISACHV05`, `ISACHV06`, `ISACHV07`, `ISACHV08`, `ISACHV09`, `ISACHV10`, `ISACHV11`, `ISACHV12`, `ISACHV13`, `ISACHV14`, `ISACHV15`, `ISACHV16`, `ISACHV17`, `ISACHV18`, `ISACHV19`, `ISACHV20`, `ISACHV21`, `ISACHV22`, `ISACHV23`, `ISACHV24`, `ISACHV25`, `ISACHV26`, `ISACHV27`, `ISACHV28`, `ISACHV29`, `ISACHV30`.

The console window also shows the following commands and output:

```

o) Jsaeger: java kgb.vdct.VisualDCT [-DDB:] [-DB:]
C:\Yusufkani\VisualDCT1207>
C:\Yusufkani\VisualDCT1207> java -cp c:\Yusufkani\VisualDCT1207\visua
-DVDC_DIR=c:\ydc\VisualDCT
Loading Visual DCT v2.0 build 1207...
o) Jsaeger: java kgb.vdct.VisualDCT [-DDB:] [-DB:]
o) No DB loaded! Exiting...
C:\Yusufkani\VisualDCT1207> java -cp c:\Yusufkani\VisualDCT1207\visua
-DVDC_DIR=c:\ydc\VisualDCT
Loading Visual DCT v2.0 build 1207...
o) Jsaeger: java kgb.vdct.VisualDCT [-DDB:] [-DB:]

```

The bottom right corner of the desktop shows a calendar for July 2002, with the date 27 highlighted in red.

Comparison of EPICS Implementations - Database (general)

◆ SLS

Oracle8i on Linux
Web/jdbc/cdev API

Archiver:

Oracle
Web interface

◆ Bessy-II

Oracle @HP

Archiver:

channel archiver
-> use Oracle for retrieval
retrieval is slow when datasize is large
Archive by Oracle has studied at SLAC

◆ KEKB

Oracle @HP

Archiver:

KB-log (homemade tool)
-> channel archiver

- ◆ Oracle is standard, but expensive - SLS uses Linux license (much cheaper)
- ◆ Archiver - channel archiver looks fine, but ..
Bessy-II reported that retrieval is slow for large data

Plan - implementations for JKJ

Main machine

Use **Linux PCs/Servers** as many as possible
but Main machine (with Tornado license) is HP-UX ..

Network

100BaseTX switches for local devices
GbE for the center
optic cables with star-topology

Directory structure and Environment

Follow the standards recommended
by EPICS traversal group

OPI

Use Linux/Windows consoles with multiple displays
MEDM/DM2k (or EDM)

IOC

Network-based devices (PLC, WE7000, Ethernet controller)
VME modules for standard io
CPU - Power PC

Database (EPICS db)

Use **VisualDCT @ Linux**
Evaluation in progress

Database (general)

Oracle ? PostgreSQL ? - not decided yet
Linux server ?
Archiver: start with **channel archiver**

Timing

not studied well ...
now we started discussion in the Timing group

Naming Convention

we are just discussing - conclusion will come soon ..

Education and Training

by EPICS traversal group
Lecture at KEK/JAERI for beginners
Japanese translation of manuals in progress

**Thank you
for your attention**

portrait by my son
