A Java-Based Parameter Page

Matt Bickley

(Work by Chip Watson et.al.)

Jefferson Lab

Controls Group

What Is a Parameter Page?

➢ A table of monitored values

	Temperature (degrees C)	Flow (lpm)	Open (%)	PID Control
Valve 1	112	54	50	ON
Valve 2	121	54	45	ON
Valve 3	89	22	32	OFF
Valve 4	67	33	52	OFF
Valve 5	78	19	36	ON
Valve 6	64	40	80	OFF

Controls Group

The SDM Parameter Page

➢ **CDEV name services and communication**

➢ **A Component of the Swing Display Manager (SDM)**
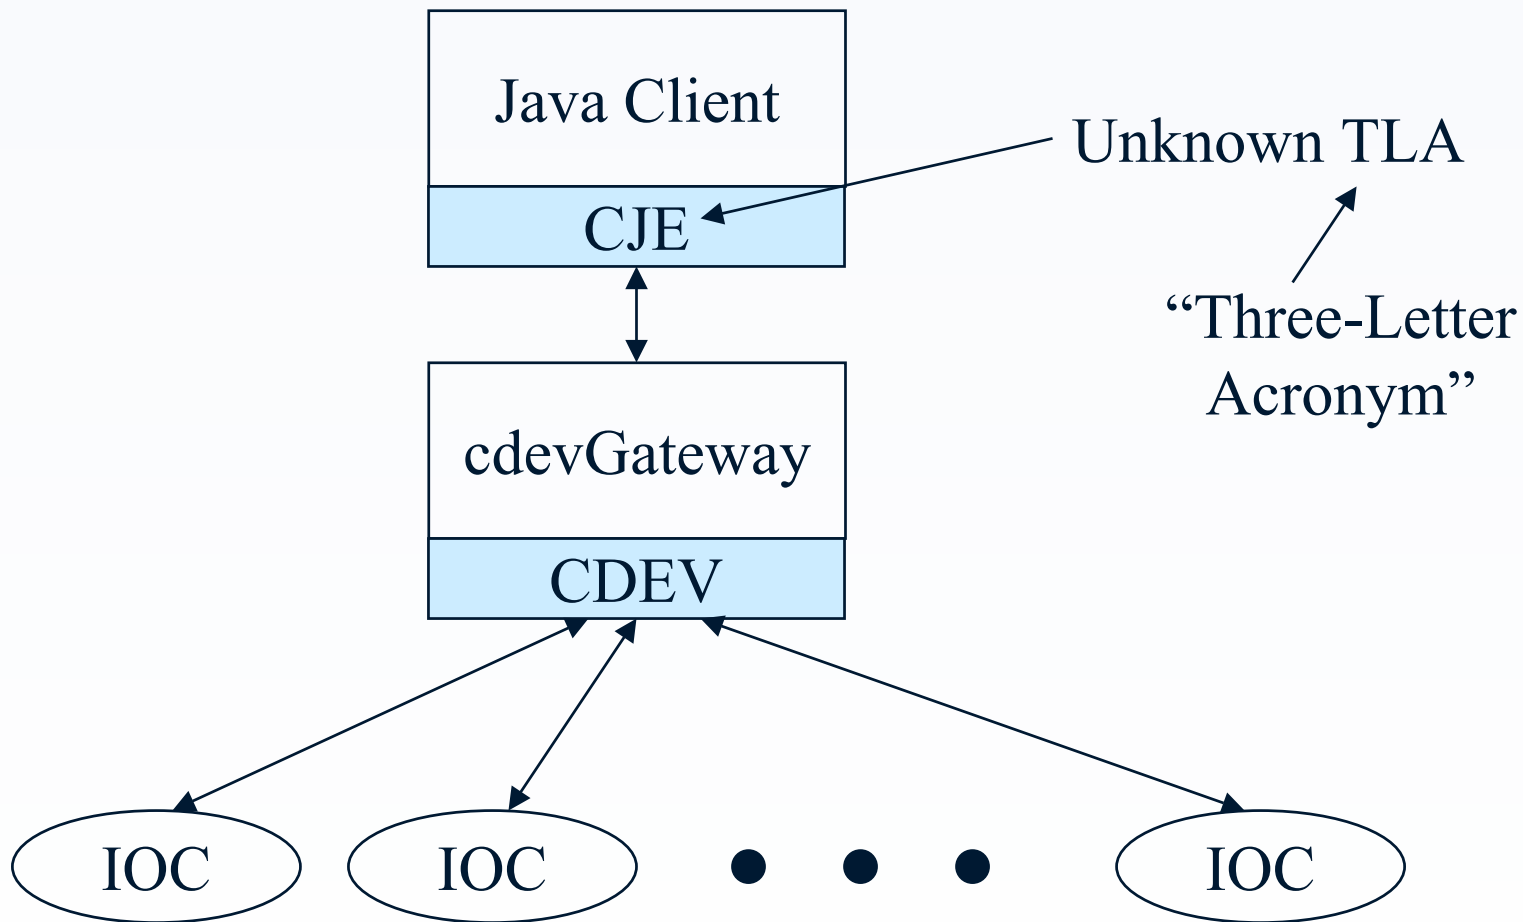

➢ **Available from the Jefferson Laboratory web site: http://www.jlab.org/cdev/java**

A Three-Tiered Architecture

Java Client

CJE

Unknown TLA

"Three-Letter Acronym"

cdevGateway

CDEV

IOC   IOC   ● ● ●   IOC

Why Three Layers?

- **Encapsulate presentation layer**
  - * **Same look and feel through browser**
  - * **Isolate GUI**
- **Gateway layer**
  - * **Enable communication in Java sandbox**
  - * **Support multiple gateways for different purposes**

Implementation Features

➢ **Inherits all behaviors from the Swing table widget**

➢ **Device/attribute design of CDEV enables the resolution to particular channels**

  * **Illustrates need for naming directory services in CA**

➢ **GUI performance may be limited by the gateway**

Jefferson Lab

Give Me a Directory Service!

➢ **Desired features in a CA directory service**

  * **Motherhood**

  * **Apple pie**

  * **Name aliases**

  * **Grouping**

  * **Wildcarding/regular expression support**
