

# RDB at SNS – Some other Thoughts

David Purcell; Jeff Patton

**EPICS Collaboration Meeting**

**April 23 - 27 2007**

# What kind of projects are people working on with RDBs?

- **Successful? (See Jeff's talk today or mine at ICALEPCS 07)**
- **Schema (IRMIS or SNS or Different)?**
- **How do folks see IRMIS helping them?**

# Who are the users of IRMIS?

- **What was the state of the RDB at the start?**
- **How did IRMIS get in the door?**
- **Is IRMIS part of a bigger RDB implementation?**

Why do facilities benefit from adopting IRMIS if they already have a functioning RDB?

Is there a plan for the expansion of  
IRMIS?

What is the RDB relationship to  
EPICS?

Can we expand on the concepts  
and leave the schema out of it?

# Wish List

- ~~Standard prescriptive schema~~
- ~~VDCT reads/writes to either ascii file or RDB~~
- ~~Interface between EDM and RDB; maybe in CSS?~~
- ~~Physic module to populate RDB from user brain waves~~
- **Perfect world.**
  - **Actually, Ideas that get more users/planners/managers hooked.**
