## Obtaining PhotoLux for Realistic Renderings

PhotoLux is a Creo plug-in. It's a step up from PhotoRender which is the bundled-with-Creo renderer. We bought 5 licenses of it so at least one ought to be available. These licenses are free-floating. All you have to do is go get one.

## Getting a License:

- 1. Within Creo, click on File and choose Options
- 2. in the left pane, click on Licensing

- File- Home New Recent F <u>Open</u> Open Last Check In 1 wtws:/ Save > 2 wtws:/ ) 3 C:\ptcte Save As 4 wtpub: Print 5 wtws:/ Close 6 wtws:/ , Z wtws:/ Manage <u>File</u> 8 wtws:/ Prepare 9 wtws:/ Send wtws:// Manage Session > wtws://" Help wtpub:/. wtpub:/. E OF X Exit
- 3. 'Floating modules' is on the top. It will show you nothing at first. Click on the *Refresh License List* button below the module area.

5. Click OK

Engaging the license isn't enough. By default, you're still using PhotoRender, not PhotoLux. Now, to actually USE it...

- 6. With a file open (prt or asm), choose the *Render* tab
- 7. Click on *Render Setup* 
  - 8. Click the dropdown for *Renderer* and choose *PhotoLux*

Now you can actually use the renderer.
