

# PV Names at the APS

- 
- ✦ There has never been an attempt to implement a site-wide PV naming convention at APS.
  - ✦ Historically, there was little need for such a convention since PV broadcasts were <by default> constrained to a local subnet.
  - ✦ This was short-sighted ...

# What's the Problem?

- 
- ✦ With the advent of PV gateways, reverse PV gateways, and liberal use of EPICS\_CA\_ADDR\_LIST, the “isolated-subnet” assumption is no longer valid.

# What's the Problem?

- 
- ✦ Separate PV name-spaces have essentially been shorted together into a global APS PV name-space.
  - ✦ There is nothing to prevent duplicate PV names from being used.
  - ✦ It will become increasingly difficult to determine the origin of a PV.

*e.g. S1:resetAll.*

# What's Next?

---

✦ BCDA will initiate a survey of PV prefixes in use

◆ Sources:

- Naming Conventions
- List of PVs from iocs (does not require rebooting)
  - ◆ Script to identify unique prefixes
- List of PVs sourced from Portable Channel Access Server applications

✦ Results of survey will be presented at the next TWG meeting

# Executive Summary

---

- ✦ No catastrophic conflicts currently exist
- ✦ There are some significant conflicts, but we can accommodate the current conventions
- ✦ We propose a few recommendations that, if followed, would provide a smooth road to a well-defined site-wide naming convention.
- ✦ Just knowing where we stand is a *huge benefit* and we thank you for your cooperation!

# Survey Results

Received responses from 22 sectors

- ◆ (1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,33,34)

In general (with a few exceptions) ...

- ◆ *13 sectors use a convention that starts with the sector number (e.g. 9ida, 14BMD, etc)*
- ◆ *5 sectors use a convention where the prefixes are lower case (pnc\*, id\*, bwi\*, lax\*)*
- ◆ *2 sectors use S##[ID,BM] as a prefix*
- ◆ *1 sector uses BM, BMT, and ID as prefixes*
- ◆ *1 sector uses only PVs from APS supplied templates*

# Survey Results

## Exceptions to stated conventions

- ◆ *Several sectors use template databases for a machine status link module and bunch clock modules that generate PVs of :*
  - $S\$(unit)^*$
  - $BL\$(S)^*$
- ◆ *A few sectors had PVs that clearly did not follow their convention (test databases, etc.)*

# Emerging Convention?

**IF:**

- ◆ ... all “maverick” PVs were corrected
- ◆ ... APS templates for the bunch clock and msl-mrd100 modules were “modified” (which would change PV names)

**THEN A STATED CONVENTION COULD BE:**

- ◆ All beamline PVs should begin with their sector number [preferred] *or* lower case letters
- ◆ All accelerator PVs (those on the .2 subnet) should begin with capital letters (almost)

**WITH THE FOLLOWING KNOWN EXCEPTIONS:**

- ◆ <next slide>

# Emerging Convention?

**... WITH THE FOLLOWING EXCEPTIONS:**

- ◆ Beamlines
  - S10ID\* (MRCAT)
  - S17ID\*, S17BM\* (IMCA-CAT)
  - BM\*, BMT\*, ID\* (SBC)
  
- ◆ Accelerator
  - ioc\* (6065)
  - Other lower case: (156)
  - PV Gateway PVs on subnets; Snn (11/sector)

# How Bad Are the Exceptions?

- 
- BL\$(S): - ☺
  - S\$(unit)BnchClk - ☺
  - S10ID: - ☹
  - S17ID: - ☹
  - S17BM: - ☹
  - BM - ☺
  - BMT - ☺
  - ID - ☹
  - ioc\* - ☺
  - Other accelerator lower case - ☺
  - PV Gateway PVs - ☺
  - ☹ - conflict exists with other PV prefixes

# Action Items

---

## Beamlines

- ◆ Publicize your PV naming convention to whomever might create PVs
- ◆ Correct “maverick” PVs that violate your own convention
- ◆ Assist in installing new template databases
- ◆ Consider “preferred” convention over self-created

## BCDA

- ◆ Provide new template databases for APS modules
- ◆ Provide a web page describing PV naming conventions and “grandfathered” exceptions
- ◆ Provide assistance in converting templates and client applications

## Accelerator Systems

- ◆ Adapt to and stay consistent with the convention
- ◆ Maintain PV Gateway access lists consistent with the conventions

# Survey Summary

No catastrophic conflicts currently exist

There are some significant conflicts, but we can accommodate the current conventions

We propose a few recommendations that, if followed, would provide a smooth road to a well-defined site-wide naming convention.

Just knowing where we stand is a *huge benefit* and we thank you for your cooperation!
